

Overview

These elements are made of high-strength aluminium alloy.

The fixing clamp is designed for single anchoring whereas the bracket offers up to 6 fixing points.

Their specific design allows fixing on wooden, metal or concrete poles.

The fixing clamp is implemented using a 10mm diameter bolt or a 20x0.7mm stainless steel strap (tensile strength: 200daN).

The ABC cable pole bracket is implemented using a 14 or 16-mm diameter bolt or using two 20x0.7mm stainless steel straps (tensile strength: 200daN/anchoring point).

This anchoring assembly meets the criteria of the NF C 33-042 and EN 50-483 standards

Anchoring bracket hook is used with bands in pole installation
