

Products Description

This coupling joins lengths of threaded copper bond earth rods together. They facilitate deep driving and ensure continual contact between the rods during and after driving. The coupling also protects the rods threads while using the driving stud. The coupling has lead for ease of assembly and a hex on the outside for grip and keeping the coupling tight when driving into the ground.

Features of Threaded Couplings:

High-strength couplings, used for joining copperbond threaded earthrods together
 Manufactured from a high copper content alloy, ensuring excellent corrosion resistance

Protect threads during installation

Ensure continual contact between the rods, during and after installation

Facilitate deep driving

Lead-in for ease of assembly

Available in hexagonal and round designs
