

## Products Description

Rod to cable G clamps are used as fasteners for tightly securing round wires to grounding rods in grounding systems where round wires are used as the grounding conductor.

Made of high quality brass, with brass or alloy screws, tight and durable.

Generally used in building lightning protection systems, conductor network fastening and connection, the use of matching clamps, can make your lightning protection system installation more convenient, longer service life.

The clamps are made from brass which gives strong resistance to corrosion. they are suitable for use with a combination of cable to ground rods. we also can customize the size to your requirement.

Material	Brass
Size	According to customer's requirement
Life	≥50years
Function	Connect ground rod to ground cable
Characters	Easy installation , good conductivity
